OUR TEAM EXPERIENCE

Delonia Software provides services and solutions based on most of the market technology platforms and tools.

Our R&D team keeps looking for trends and new technologies, which are applicable to customer software developments, start-ups we support or internal “proof of concept” projects.

As a result of our experiences in both market standards and technology research, we are able to offer a wide range of platforms and tools to support new projects, adapting our capacity to each customer IT context and constraints.

This talent, searched and cultivated in our team, serves to Development Services & Solutions Integration: from tailor made software applications to remediation consultancy services, Delonia can provide the right knowledge and experienced team, with the sole purpose of solving our customer’s problems and needs.

In this document you’ll find the main technologies, platforms and tools our team is used to work with. *If you do not find the specific technology you need, please contact us for more details.*
